

# Dhaval Jariwala

(236)-862-2253 ◇ jariwala.dh@northeastern.edu ◇ LinkedIn/dhavaljariwala15 ◇ Github/dhvl15 ◇ Vancouver, BC

AI engineer with experience across ETL pipelines, analytics, LLM systems, and agentic workflows.

I understand messy data end-to-end and build intelligent systems that turn it into decisions, automation, and product value.

## WORK EXPERIENCE

### Data Scientist, R&D

Feb 2025 – Present

*Wiser AI*

*Vancouver, BC*

- Conducted research and data alignment across firmographic, technographic, vulnerability, news, sentiment, dark web, and external threat intelligence datasets to strengthen threat scoring algorithm, identify capability gaps, and inform product direction for vendor risk analysis.
- Built ETL pipelines and backend data services connecting PostgreSQL to operationalize threat intelligence data for downstream threat scoring and vendor risk analysis in the financial sector.
- Built analytical models to identify CVE similarity patterns and analyze KEV conversion timelines, leveraging CVE, CWE, CPE, CVSS, and EPSS data to improve vulnerability clustering, exploit prediction, and patch prioritization strategies.
- Designed and implemented an autonomous multi-agent pentesting framework using OpenClaw, with dynamic agent spawning, reusable skills, Docker sandboxing, persistent memory, and integrations such as Nmap and Nuclei for iterative security analysis.

### Data Engineer, Co-op

Jan 2024 – Sep 2024

*TransLink*

*Vancouver, BC*

- Supported migrating on-prem SQL Server databases to Azure Data Lakes, leveraging SSIS and Azure Synapse to enhance data scalability and accessibility.
- Created multiple interactive Power BI dashboards for real-time monitoring and detailed analysis of device events, supporting data-driven decisions regarding customer behaviour, usage patterns, and device performance.
- Automated fare infraction dispute reporting by building ETL pipelines from Excel to SQL Server, eliminating 4 days of manual entry per quarter, and developed Power BI dashboards to improve workflow efficiency and reporting accuracy.
- Supported deployment and monitoring of RFID-based accessibility gate systems, ensuring high-quality data ingestion for real-time operational tracking and analytics.

## SKILLS

**Languages:** Python, SQL, R, Java, Dart, HTML/CSS

**Data Engineering:** ETL/ELT, SSIS, Azure Synapse, Azure Data Lakes, SQL Server, PostgreSQL, PySpark, Airflow

**Analytics & BI:** Power BI, DAX, Power Query, Streamlit, Jupyter, Matplotlib

**AI/ML:** LLMs, RAG, LangChain, Vector Databases, Prompt Engineering, OpenClaw, Scikit-learn, PyTorch, TensorFlow, SpaCy/NER

**Cloud & DevOps:** Azure, AWS, Docker, Git, CI/CD, Firebase

**Backend/API:** Flask, REST APIs, MongoDB, SQLite

## EDUCATION

### Master of Science, Data Analytics Engineering

Sep 2022 – Dec 2024

*Northeastern University - College of Engineering*

*Vancouver, BC*

### Bachelor of Engineering, Computer Engineering

Aug 2017 – Oct 2020

*University of Mumbai - Shah & Anchor Kutchhi Engineering College*

*Mumbai, India*

## PROJECTS

### Information Extraction in Cybersecurity with AI: *Python, spaCy, Streamlit, LLM, Hugging Face, Neo4j* Dec 2024

- Automated risk detection and insight generation from NVD data using spaCy, LLMs, and custom named entity recognition for vendors, products, and exploits.
- Built Streamlit dashboards and Neo4j knowledge graphs to visualize vulnerability relationships, vendor exposure, and risk pathways.

### AI-Powered Job Search and Application Tracker: *Claude Code, Obsidian, Markdown, Dataview, Python, Git* Apr 2026 – Present

- Built an AI-powered job search workflow that turns scattered postings, resumes, reviews, and follow-ups into a structured Obsidian pipeline for faster, more targeted applications.
- Designed modular Claude Code skills for role-fit scoring, resume tailoring, ATS review, outreach, deduplication, and skill-gap analytics to reduce manual work and improve application consistency.
